

PORTFOLIO 5 | STRINGS

Ella Mae E. Himor- BSChE-1A

NOTEBOOK/CODE CELLS

Concepts Used

- Strings
- User input
- String formatting
- String methods
- Conditional statements

Description

The user will enter their mood, favorite OPM artist, and favorite genre. The program will then analyze the input and generate personalized OPM song recommendations.

OUTPUT AFTER RUNNING

OPM Song Recommendation System

Objective

This program recommends OPM songs based on the user's mood, favorite artist, and favorite genre using Python string concepts.

Concepts Used

- Strings
- User input
- String formatting
- String methods
- Conditional statements

Description

The user will enter their mood, favorite OPM artist, and favorite genre. The program will then analyze the input and generate personalized OPM song recommendations.

Created by: Ella Mae Hilmor

```
[1]: # OPM Song Recommendation System
# Getting user information

print("Welcome to the OPM Recommendation System")

name = input("Enter your name: ")
mood = input("Enter your current mood: ")
artist = input("Enter your favorite OPM artist: ")
genre = input("Enter your favorite genre: ")

# String formatting
name = name.title()
mood = mood.lower()
artist = artist.title()
genre = genre.title()

print("----- USER PROFILE -----")
print("Name:", name)
print("Mood:", mood.upper())
print("Favorite Artist:", artist)
print("Favorite Genre:", genre)

Welcome to the OPM Recommendation System
Enter your name: Ella
Enter your current mood: happy
Enter your favorite OPM artist: Eraserheads
Enter your favorite genre: chill
----- USER PROFILE -----
Name: Ella
Mood: HAPPY
Favorite Artist: Eraserheads
Favorite Genre: Chill
```

```
[2]: # String analysis section

print("----- STRING ANALYSIS -----")

# Counting characters
print("Number of characters in your name:", len(name))

# Uppercase and lowercase
print("Artist in uppercase:", artist.upper())
print("Genre in lowercase:", genre.lower())

# Reversing the user's name
print("Your name reversed:", name[::-1])

# Checking if mood contains specific words
if "sad" in mood:
    print("You seem to enjoy emotional songs.")
elif "happy" in mood:
    print("You seem to enjoy energetic songs.")
else:
    print("You have a unique music vibe!")

----- STRING ANALYSIS -----
Number of characters in your name: 4
Artist in uppercase: ERASERHEADS
Genre in lowercase: chill
Your name reversed: allE
You seem to enjoy energetic songs.
```

```
